

Alexander Ovchinnikov

ABOUT ME

Frontend developer with experience working in strong and great teams. I love creating user-friendly and beautiful interfaces, while always paying attention to code quality and performance. I actively use modern approaches and practices in my work, often engaging in refactoring and optimization. I also have experience in mentoring and conducting technical interviews, helping the team grow and achieve high results.

I have basic knowledge of **React** and **Angular**. I can easily adapt to these frameworks as I find them similar in nature. This is a great opportunity for me to expand my tech stack.

I am motivated for continuous development and solving complex problems that bring value to the company. I prefer product companies but am open to project-based development with good management.

I am open to fully remote work or relocating to an office anywhere in the world.

SKILLS

Skills and tools that I use in my daily work.

Frontend

-  HTML
-  JavaScript
-  Vue
-  CSS
-  TypeScript
-  Responsive Design

Backend

-  Node.js
-  Express Express.js
-  Nest.js
-  Supabase
-  PostgreSQL
-  SSE /WebSockets

Tooling

-  SCSS
-  BEM
-  VueUse
-  Vuelidate
-  Style Modules
-  Python
-  Lodash
-  Pinia
-  Strapi
-  i18n
-  Swiper
-  PWA
-  Git
-  CI/CD
-  Prettier
-  ESLint
-  Stylelint
-  Figma
-  Figma Tokens
-  Storybook

Testing

-  Cypress
-  Jest

Optimization

-  SEO Optimization
-  Project Optimization

Code Quality

-  Code Review
-  Documentation

WORK EXPERIENCE

Total experience is more than 4 years

Vue Frontend Developer, WinTech, Remote

October 2023 - Present

Key Responsibilities:

- Design and implement new interfaces and features.
- Cross-browser layout.
- Optimization and maintenance of existing code, fixing bugs.
- Participate in the development of web application architecture.
- Evaluate and decompose project tasks.
- Participate in hiring and team development: conducting technical interviews, developing candidate evaluation criteria.

Key Achievements:

- Completed the probation period early by analyzing current projects and suggesting improvements in code quality and processes.
- Performed a full refactor of the company's main project.
- Reduced the size of the main application bundle by three times.
- Increased website performance by 5 times.
- Ensured code cleanliness and readability by implementing and maintaining standards using ESLint, Stylelint, and Prettier.
- Mentored a new employee, leading to a successful onboarding process.
- Organized onboarding and assisted colleagues with tasks.
- Held the role of acting team leader for a team of 8 frontend developers.
- Conducted regular meetings with colleagues to discuss and implement new technologies in our project.
- Introduced project documentation and processes, from acceptance rules to implementation, task reviews, and style guides.
- Appointed as the leader of a strategic project, which confirmed the high evaluation of my work and demonstrated my development potential in the company.

Vue Frontend Developer, Idaproject, Hybrid

September 2020 - September 2023

Key Responsibilities:

- Participated in the development of the product 'IdaLite' from scratch to production in a small team.
- Developed a landing page for 'IdaLite'.
- Participated in the creation of a user dashboard and its internal applications with various integrations and Backend API interaction.
- Developed the architecture of a block library for a website builder and implemented over 600 blocks with various functionalities.
- Developed a visual object selection tool for project images using SVG and Canvas.
- Developed an SSR site that generated websites created in the builder.

Key Achievements:

- Made significant contributions to internal repositories with configurations, UI libraries, and tools.
- Actively participated in code reviews and refactoring to improve code readability and performance.
- Showed the ability to understand others' code and successfully integrated into the development team, helping new colleagues.
- Ensured the stability and quality of releases in production, sometimes taking on the role of team lead.
- Supported and developed internal libraries, participated in their releases.
- Used Jest testing to ensure the stability of the codebase.
- This experience enriched my deep understanding of **Vue.js** and **Nuxt.js**, and improved my teamwork, development, and optimization skills.

PROJECTS

Projects that I have created or maintain.

[n3-workspace](#) ↗

- In Progress
- Frontend

Monorepo for all my Nuxt projects. This website is also built on this base.

[n3-workspace/dev-kit-layer](#) ↗

- In Progress
- Frontend

Nuxt 3 layer with utilities, components, and modules for rapid project setup.

[n3-workspace/converter](#) ↗

- Completed
- Frontend
- Test Task

This is a single-page application (SPA) for currency conversion built using the Nuxt 3 framework for a test task. The app includes two pages:

- Home:** Displays currency rates relative to the main currency of the site.
- Conversion:** A form for currency conversion with the option to select a currency and auto-recalculate values.

Full details can be found in the app's README.

[View](#)

[n3-workspace/shopping-list](#) ↗

- Completed
- Frontend

A shopping list for creating and sharing with integration to Supabase for database management.

[View](#)

[task-trackers](#) ↗

- In Progress
- Frontend
- Backend
- Desktop Only

Monorepo with task trackers on various frameworks for learning and testing purposes.

[Design](#)

[groom-crm](#) ↗

- In Progress
- Frontend
- Needs Update
- Desktop Only

A simple CRM for managing and tracking clients in grooming salons.

[portfolio_gallery](#) ↗

- Completed
- Frontend
- Needs Update
- Desktop Only

Examples of my work showcasing the design and functionality of my projects.
